Features

35mm X-Width:

The wider the rim, the better the contact patch with the ground for tires.

Also, the air volume in the tire increases, smoothing out the small bumps that cause your hands and wrists to get cramped up.

Tubeless Compatible:

This function allows you to run tubeless perfectly.

AIO System:

The AIO (all in one) system is another technical method to strengthen the rim by using long and continuous carbon fiber layers to wrap into rim. For only one overlap of a layer circle, not only can it keep the original continuous strength of carbon fiber layers, but also it saves weight
